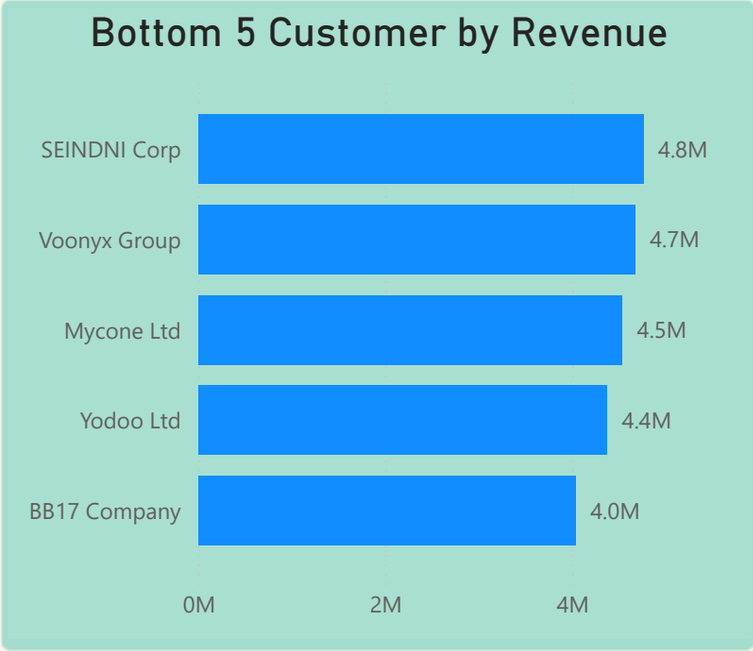
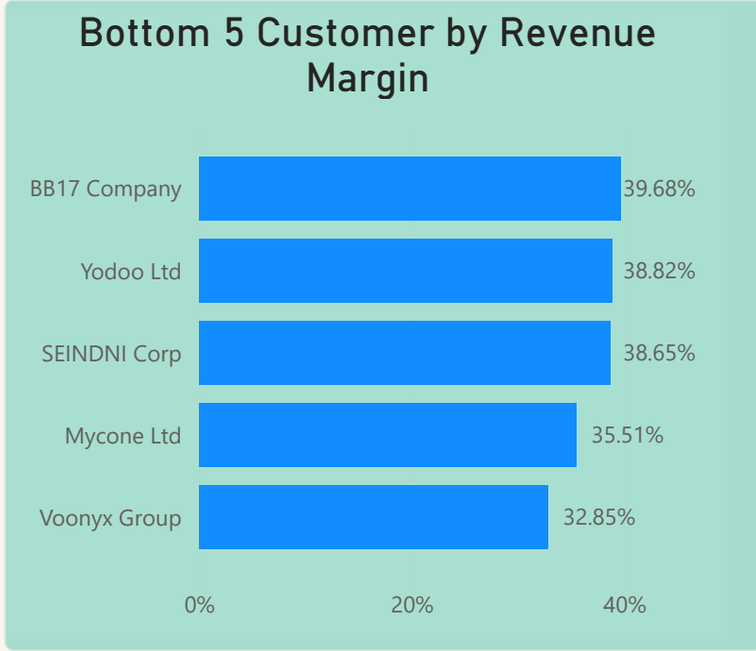
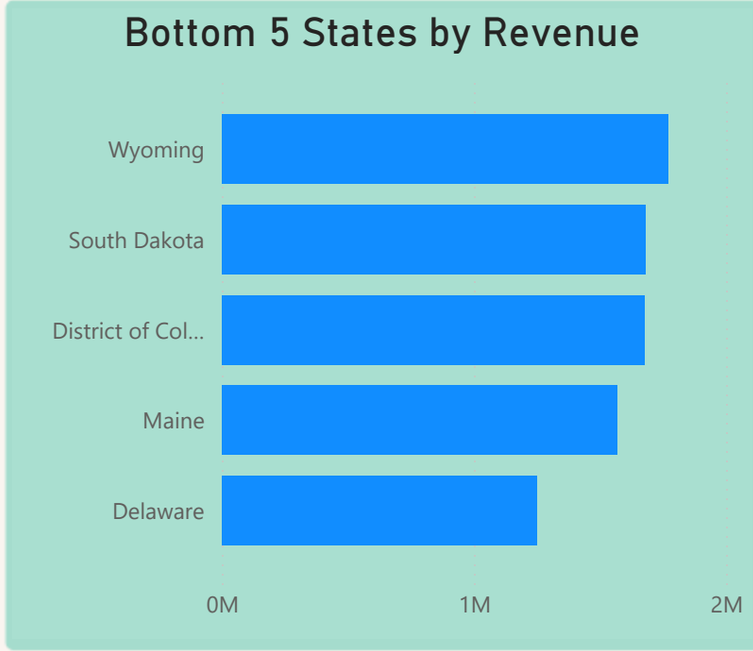
Top 5 | Bottom 5







Revenue Vulnerability: Our lowest-performing accounts, led by **BB17 Company** ($4.0M$), represent a significant opportunity for growth. There is a **$0.8M $ variance** within the bottom five tier alone, suggesting inconsistent account management or market penetration.

Margin Risk: Voonyx Group is currently our most concerning account, sitting in the bottom five for both total revenue and revenue margin (**32.85%**). This suggests that we are potentially underpricing or over-servicing this client compared to the portfolio average of $~39\%$.

Regional Underperformance: Delaware and **Maine** are currently our lowest-revenue territories. These states represent untapped potential or high-cost-to-serve markets that may require a revised regional strategy to match the scale of leaders like California.
